

Entertainment Water Sets

Capturing the right visual effect for a water scene can be challenging. Portadam's temporary water storage systems can help you meet those challenges in a cost and schedule efficient manner.

For over 15 years the Portadam system has been used as an effective method for creating water props and sets. It is a safe and simple engineered solution that has been successfully used in numerous tradeshow, motion picture and television productions both nationally and internationally. Our system has been used in productions such as CBS' hit series CSI and well recognized movies such as "The Patriot" as well as large scale tradeshows overseas.

The flexibility of the system allows for a compact layout in tight spaces or for the production of a water scene on a grand scale. Additionally our system can be reconfigured to allow for needed changes on the set. An added benefit is that the Portadam system is robust enough to enable you to float and maneuver watercraft on it.

Key Advantages

- Flexible design allows custom layout
- Water depths from 3 to 12 feet
- Can be erected in-studio or on-location
- Quicker, less manpower and equipment for setup/removal
- Rugged and safe
- Engineered design
