

Pipeline Water Crossings

For over 35 years, Portadam has provided innovative solutions for cofferdam, water storage and flood protection requirements. Our temporary cofferdam equipment has enabled pipeline contractors to safely perform their in-water work in a dry condition – with definite schedule and cost benefits. We have successfully completed numerous pipeline projects and continue to receive positive feedback about our solution. Whether the pipeline needs to cross a river, lake or wetland, our system can be an effective solution for you.

Portadam's freestanding design allows for simple and safe installation to help meet your pipeline project deadlines. The system has proven to be a clean and cost effective method of performing open cut construction of pipelines across rivers and streams. Our system can also be utilized to provide temporary water storage for pipeline hydro-testing.

Key Advantages

- Excavation depths are greatly reduced
- Work area unobstructed and completely free of cross bracing
- Allows for installation over irregular contours and around obstructions.
- Adjustment of the river or streambed prior to installation is normally not required
- Environmentally-friendly with no introduction of harmful materials to the watercourse
- Unimpeded flow of water around the entire work site

Contact us today to see if Portadam is a good fit for your next project.
